LANGUAGES

Romanian: **native**
English: **advanced technical**

KEY SKILLS

- AI integration & MCP servers
- PHP 7.4 / 8.x + MySQL
- Python + PySide6 (Qt)
- REST API & enterprise integrations
- Zimbra SOAP, RT REST
- Auth0, WebAuthn, Stripe
- Linux VPS, cPanel, Apache
- Tailwind CSS, Vanilla JS
- Active Directory, VMware
- Programmatic multi-language SEO

AI STACK

- OpenAI (API, Codex, adversarial)
- Anthropic (Claude Sonnet, Opus, Haiku)
- Google Gemini (CLI + sessions)
- Claude Code (CLI + sessions)
- Custom MCP server in PHP

EDUCATION

Hyperion University

Computer Science / Programmer Analyst · 2016–2018

Ecoprof High School

Mathematics-Computer Science · 2002–2006

Cătălin Paul Popescu

AI Solutions Architect & Network Administrator

PROFILE

AI Solutions Architect & Agentic AI Engineer with 10+ years in IT, the last year and a half deep in AI work. I build software products with AI assistance, but the technical and product decisions are mine; AI is an execution partner, not the author.

Intensive hands-on usage: in a peak month, 49M+ tokens processed (equivalent to ~243 "Lord of the Rings" books). I work daily with multi-agent orchestration pipelines — a coordinator session spawning parallel implementation sessions, monitoring progress, escalating only novel questions. Full applications built end-to-end in a single workflow, validated across multiple projects.

I work server-to-UI: code, deployment, security, documentation — the person who connects the pieces, not the specialist on a single layer. Before AI, 8+ years in network administration (6+ at Camusat). The infrastructure mindset helps me build AI systems that actually run in production, not just demos.

PROFESSIONAL EXPERIENCE

Camusat Holding

August 2019 – Present

AI Solutions Architect (since 2026) + Network Administrator (original official role)

International group with ~15 subsidiaries (Romania, France, other European countries).

As AI Solutions Architect (since 2026):

- I built and adapted a multi-project AI orchestrator workspace (MCP server with scope-aware security, token authorization) — single point of truth for all AI initiatives across the company.
- I delivered MailDesk v2.0 — internal portal for provisioning Zimbra email accounts via RT ticketing, in active production, used by the IT team.
- I built Audisity — Windows desktop application for storage audit used by Camusat through granular scanning by file type (ZIP, JPG, PST, file age, etc). Integrated licensing system for parallel commercial exploitation.
- I am responsible for the company's AI projects: governance, audit, verification. I step in when colleagues from DevOps, web design or coding get stuck on AI projects, and I align deliverables to the IT department standards.
- Internal mentor for colleagues on AI usage.

As Network Administrator (2019 – present):

- Multi-country Active Directory administration for ~15 subsidiaries.
- Zimbra email server (SSH + control panel), VMware ESXi, Hyper-V, Fortinet (firewall + VPN), Zabbix monitoring.
- VPN, GPO, DNS, DHCP, Office 365, ticketing system, cloud services.
- Procedures and local IT training for subsidiaries.

Solo Founder · Instantino

June 2025 – Present

B2B SaaS platform for instant PDF quotes, in production since March 2026

- Built end-to-end and solo: multi-tenant architecture, PHP + MySQL backend, Tailwind + Vanilla JS frontend, automated deployment.
- Integrations: Stripe Live, Auth0 SSO, WebAuthn FIDO2, mPDF, PHPMailer (SMTP + IMAP monitoring).

- Support for 6 languages (RO / EN / FR / DE / IT / ES) with programmatic SEO, dynamic sitemap, cross-domain hreflang.
- Onboarding wizard with automatic niche detection via AI (Claude Sonnet + GPT-5 + Serper) and AI generator of custom forms for unknown niches, with admin approval queue.
- Custom MCP server in PHP with dedicated tools for local orchestration with Claude Code.
- I built a complete no-code form creation pipeline — 11 admin web tools that take a form from request to publication: JSON schema editor, schema normalizer, PHP code generator from JSON, standardized blocks editor, naming fixer, multi-language AI translator with cache and dedup, translations audit log. Admin can create new forms without writing manual code.
- I built Nexus Cockpit v2 — interactive terminal dashboard (Python + Textual) with 9 panels in a 3x3 grid for live monitoring of Instantino. Captures into a SQLite database all MCP calls, Tetrada CLI (Claude / Gemini / Codex) and Nexus / Guardian actions, through a central hook in the MCP server. Includes interactive navigation, filters, search and live business metrics (leads, emails, replies).
- Custom cold email outreach module with automatic SMTP account warm-up, account testing (DNS + RBL + Postmark + mail-tester), multi-language reply categorizer.
- Auto-publishing on Facebook + LinkedIn and multilingual AI video content for marketing.

Network Administrator · Can-Pack Romania *August 2018 – June 2019*

- Network administration, Active Directory, Office 365.
- LAN / WAN / VLAN configuration, Cisco / Fortinet equipment.

IT Technician · Diablos Computers *April 2017 – July 2018*

- Hardware configuration and troubleshooting (laptops, rack servers, POS systems, printers).
- TCP/IP networking, operating systems installation.

Customer Services Agent · Depanero *November 2014 – April 2016*

- CRM, customer service.

ADDITIONAL PERSONAL PROJECTS

- **Carpatica Transport** — bilingual RO/EN marketing site for external client (transport company, Sibiu). Tailwind + Vanilla JS, automated deployment. Live: carpatica.instantino.ro.
- **Scrapix** — outreach platform v2 in development, clean refactor of the Instantino pipeline. Modular PHP with KAIROS monitoring.
- **TokSape** (May – June 2025) — 100% PHP MVP prototype for construction quoting; historical predecessor of Instantino, abandoned as a separate product.

TECHNICAL SKILLS

AI & Orchestration: OpenAI, Anthropic Claude (Sonnet, Opus), Google Gemini, Claude Code, custom MCP servers in PHP, workflows with fallback between models

Backend & Web: PHP 7.4 / 8.x, MySQL / MariaDB, REST API, PDO, sessions, Apache,

No-code / low-code platform engineering: text-to-JSON DSL parsers, JSON schema editors, PHP code generators, AI translators with cache & dedup, schema migration with validators

Frontend: HTML, CSS, Tailwind CSS, vanilla JavaScript, AJAX

Desktop applications: Python + PySide6 (Qt GUI), openpyxl, PyInstaller, multi-threading with QThread

Enterprise integrations: Zimbra Admin SOAP, Request Tracker REST, Auth0 SSO, WebAuthn FIDO2, Stripe, PHPMailer, Facebook Graph API, LinkedIn API v2, Serper.dev

DevOps & Infrastructure: Linux VPS, cPanel, XAMPP Windows, Git deploy hooks + GitHub webhooks, Bash, PowerShell

Security: Multi-tier auth (session + HMAC + WebAuthn), CSRF protection, rate limiting, SSRF guard, brute-force protection, audit logs

Documents: mPDF, PhpSpreadsheet, openpyxl, CSV / XLSX export with charts and templates

Email & Outreach: DMARC / DKIM / SPF, cold email automation, bounce monitoring, anti-spam, multi-language reply categorizer

Programmatic SEO: dynamically generated pages, cross-domain hreflang, dynamic sitemap, JSON-LD, SEO audit

Multi-language: RO, EN, FR, DE, IT, ES — i18n key management, translation pipeline with AI + cache, geo-redirect, cultural adaptation

Network admin: Active Directory, Zimbra, VMware ESXi, Hyper-V, Fortinet, Zabbix, VPN, GPO, DNS, DHCP, Office 365

WORK STYLE

- I build products with AI assistance — the technical and product decisions are mine.
- Brief-driven development; backup and dry-run before irreversible changes.
- Self-audit on my own code; technical documentation on every module.
- I prefer solutions that work in production over trendy stacks.
